

You must REJECT the NAB's PETITION 04-160. Access to local information, especially traffic and weather is vital to those traveling long distances. With timely information routing can be adjusted thus reducing traffic tie-ups. With the nations roads already overused, I would think anything that serves to reduce this problem is a no-brainer.

Furthermore, I think it's wrong for the Govt to protect NAB members in this way. Technology means to move forward and these restrictions only serve to slow us down. We cannot have another HDTV type of fiasco! Satellite radio is great. The fact we are willing to pay for it shows how valuable the service is to us and how it fills an area not served by local stations.

If the NAB wants protection let them start their own satellite service.

And lastly, I believe to restrict content in this way is a violation of the first amendment.
